

# Revolabs FLX & HD USB Audio Connector Kit

## 01-USBAUD35-KIT

To connect the Revolabs HD SGL/DUAL receiver to your computer use the Revolabs FLX/HD USB Audio Connector Kit (01-USBAUD35-KIT).

Plug the Stereo side of the cable (2 black lines on cable tip) into the USB audio dongle, and the mono side (one black line on cable tip) into the HD Base Station OUT as shown below. Ensure that the Microphone input of the dongle is connected to the OUT port of the HD Base Station. **\*For HD Single or Dual & EDU KIT, engage DIP switch #1 & #3 to the down position.**

Once you connect the dongle to your computer, the operating system should automatically detect the dongle as an audio device, and load the required drivers. No software should need to be installed on the computer.
